

Design A · Modern Shed-Roof Bungalow

BASE SIZE	WALL HEIGHT	TOTAL PIECES
30 × 23 cm	14–18 cm	6 pieces

CUT LIST · DESIGN A

All measurements in centimetres. Cut from one 50 × 76 cm foam core sheet. Allow ~5 mm between pieces for blade clearance.

#	Piece	Width	Height	Notes
1	Base / floor	30.0 cm	23.0 cm	Rectangle. 1 cm lip extends past walls on every side.
2	Front wall	28.0 cm	14.0 cm	Cut door 6 × 8 cm and two windows 7 × 5 cm.
3	Back wall	28.0 cm	18.0 cm	Optional window 11 × 4 cm centred.
4	Left side wall	21.0 cm	18.0 cm	Trim top edge to slope from 18 cm down to 14 cm.
5	Right side wall	21.0 cm	18.0 cm	Mirror of piece 4. Slope from 18 cm to 14 cm.
6	Roof panel	29.0 cm	22.0 cm	Single sloped panel. 5 mm overhang on all sides.

ASSEMBLY TIPS

- Cut the roof panel last — it is the largest single piece.
- Score the slope on side walls (pieces 4 & 5) with a ruler before cutting.
- Dry-fit all walls on the base before gluing.

Design B · L-Shaped Bungalow

BASE SIZE	WALL HEIGHT	TOTAL PIECES
30 × 30 cm (L-shape)	14 cm	9 pieces

CUT LIST · DESIGN B

All measurements in centimetres. The L-shaped base is cut from a single 30 × 30 cm rectangle by removing one 15 × 14 cm corner cutout. Walls sit exactly 1 cm in from each base edge.

#	Piece	Width	Height	Notes
1	Base / floor	30.0 cm	30.0 cm	Cut as 30 × 30 square, then remove a 15 × 14 cm corner to form the L. Leaves a 1 cm perimeter lip.
2	Back wall	28.0 cm	14.0 cm	Full rear wall. Cut door 4 × 7 cm near one end.
3	Right wall	14.0 cm	14.0 cm	Short exterior side wall; spans from back wall to the outer wing edge.
4	Wing-front wall	15.0 cm	14.0 cm	Front face of the projecting wing; spans the full 15 cm wing width.
5	Wing-inner wall	14.0 cm	14.0 cm	Perpendicular inner wall forming the recessed corner of the L. Butts against back wall.
6	Front wall (main)	13.0 cm	14.0 cm	Main front panel beside the wing; spans remaining 13 cm of front.
7	Left wall	28.0 cm	14.0 cm	Full-length exterior left wall. Optional window 5 × 4 cm.
8	Roof — main	29.0 cm	15.0 cm	Covers main section. Width = 28 cm + 1 cm eave; depth = 14 cm + 1 cm eave.
9	Roof — wing	16.0 cm	15.0 cm	Extension roof panel. Width = 15 cm + 1 cm eave; depth = 14 cm + 1 cm eave.

ASSEMBLY TIPS

- Cut the L-shaped base first and verify the corner cutout is square before proceeding.
- Pieces 3 and 4 are easy to confuse — label them as soon as you cut them.
- Build the main box (pieces 2, 3, 6, 7) before attaching the wing (pieces 4 & 5).
- The two roof panels (8 & 9) should be butt-joined flush with no gap at the step.

Design C · Classic Pitched-Roof Bungalow

BASE SIZE	WALL HEIGHT	TOTAL PIECES
27 × 27 cm	14 cm to eaves, 20 cm to peak	7 pieces

CUT LIST · DESIGN C

All measurements in centimetres. The two gable walls require trimming a triangular peak — do this AFTER cutting the rectangle. Cut from one 50 × 76 cm foam core sheet.

#	Piece	Width	Height	Notes
1	Base / floor	27.0 cm	27.0 cm	Square. 1 cm lip extends past walls on every side.
2	Front gable wall	25.0 cm	20.0 cm	Cut 25 × 20 cm rectangle, then trim each top corner up to a centre peak at 20 cm. Wall edges remain 14 cm tall.
3	Back gable wall	25.0 cm	20.0 cm	Same as piece 2. Optional small round window in the gable.
4	Left side wall	25.0 cm	14.0 cm	Plain rectangle. Add one 5 × 4 cm window if desired.
5	Right side wall	25.0 cm	14.0 cm	Mirror of piece 4.
6	Roof panel A	28.0 cm	15.0 cm	One slope of the gable roof. 1 cm overhang at eaves.
7	Roof panel B	28.0 cm	15.0 cm	Mirror of piece 6. Glue both panels together at the ridge.

ASSEMBLY TIPS

- Cut the gable triangles slowly — a small gap at the peak is easy to fill with glue.
- Dry-fit both roof panels at the ridge before gluing to check the peak angle.
- Glue side walls (pieces 4 & 5) first, then gable walls, then the roof.
